Dr. Matthew Meselson  
Harvard University  
The Biological Laboratories  
16 Divinity Avenue  
Cambridge, Massachusetts 02138

November 26, 1971

Dear Matthew:

Thank you for the copies of the American Chemical Society symposium article and your grant proposal. I intend personally to see that the proposal is handled as expeditiously as possible by our grants and contracts division.

I was interested to receive the letter and information from the law firm in New Mexico concerned with the use of Silvex and 2,4,5-T in that area. I am returning your copy. EPA has, as you may know, been involved in the analysis of some of the carcasses of the exposed cattle. Also, one of our staff from the Georgia laboratory has been looking into the case of the child who allegedly became ill as a result of the spraying. We are awaiting the outcome of these tests to determine what further action should be taken.

I look forward to our next meeting.

Sincerely yours,

Marshall Miller  
Special Assistant to the Administrator
