Dear Prof Meselson,

Thanks for an article on the
anthrax from old journal. I recently had
been asked by some "Freedom House" in
New York to comment on "Yellow Rain"
problem, but I declined this offer - this
is too difficult for me on the basis of
available reports which they sent to me.
Some Fusarium^{spores} could be brought to this
area with soviet grain and infect local
plants. It would be of interest to find
out something about wild animals (mice
rat etc) and also birds (especially migrating).
In general I am rather sceptical about the
official US report, but I have very
little opportunities for independent study
With best wishes
Yours
D. Zh.A. Medvedev
