Dear Shirley:

This is a belated thank you for sending a copy of Hugh Crone's report. Its identification of plant families was one of the things which drew our attention to bees. I am enclosing the five page summary we presented at the AAAS Meeting in Detroit on May 31, 1982 with some other related items. The tables (I,II,III) were prepared by Julian Robinson and me, mainly by Julian. Wherever there are dots it means we do not have the information. Julian and I would be extremely grateful for any data you might be able to add that would reduce the number of dots in the tables. I hope we see each other again before too long. Please try to come to the next Pugwash Meeting, so will I.

Sincerely

Sincerely,

Matthew Meselson
