Lyon, le December 17, 1984

Dear Mathew,

Annie HUBERT told me the good time you had together during your stay in Paris. So she mentionned me that you know about Canadian laboratory which tests all micotoxins. This information might be of great interest to us to trace the possible oncogenic factor present in the food of ethnic groups at high risk for nasopharyngeal carcinoma, namely Chinese, Arabs and Eskimos.

Let me take this opportunity to send you my best Season Greeting and warmest wishes for 1985.

Yours Sincerely,

Pr. Guy de Thé
Research Director CNRS
