Dear Matthew:

Thanks very much for the Scientific American article, which I read with great interest and, not to my surprise, found very convincing. I'm still curious about the results of the mycotoxin tests done on the moldy food and bee feces you and Tom Seeley brought back from Thailand. Did any of your samples contain trichothecenes? Are they still in the process of being analyzed?

And, again, thanks for all your help with the LIFE story. I found your project fascinating, and your conversation about it enlightening. The piece was very well received by our readers; I like to think there are people out in Kansas who through hearing of your work have become a little more skeptical of the current administration's accusations against the U.S.S.R.

Sincerely,

Anne Fadiman
