Dear Yuval:

I had long looked forward to the pleasure of talking with you and I wasn't disappointed. Here is the memorandum I mentioned concerning nerve agent antidote TAB. The point is that TAB should never be used by soldiers who are expected to remain functional. I would be relieved to have positive confirmation that the IDF understand this.

I had meant to ask you three questions, not two. The third is about the West Bank. If you have written anything about near term and/or long term solutions I would appreciate receiving a copy.

Warm regards,

Matthew Meselson
