Cambridge, Mass., 02138

Dear Dr. Meselson :

Perhaps you remember my writing to you a couple of letters sometime ago regarding CBW. You were kind enough to provide me with some information and data on JP Robinson's group. After doing bacterial physiology research -- for several years here in México with stays at Johns Hopkins (Herriott) and UCLA School of Medicine (Zamenhof) I widened my research interests and went into science policy and history of science, particularly CBW arms development. In the framework of education for peace I have lately published several papers in spanish and lectured.

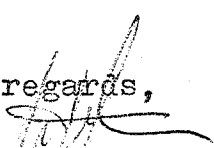

In a position to enjoy my sabbatical leave of absence from my university next year, I plan to take the opportunity to deepen studies in some aspects of this area, would it be possible to spend sometime collaborating if possible with your group ? I am in the process of applying for a fellowship that would enable me support for a short stay; I plan also to visit SIPRI and JP Robinson at Sussex also. If you think there is a possibility for me I could send you my curriculum, references and perhaps a summary of my proposed activities.

Looking forward to your reply I send you my

home address

Best regards,

Dear Dr. Servin-Massieu:

Thank you for your letter of October 14. I certainly would enjoy meeting you sometime during the next year if you should come to Cambridge. Perhaps I should say, I have no group with me working in the area of CBW. My research and teaching is in molecular genetics. CBW is something I do as an extra-curricular activity.

Sincerely yours,

Matthew Meselson
Professor of Biochemistry
and Molecular Biology
