OFFICE OF THE ASSISTANT SECRETARY OF DEFENSE
WASHINGTON, DC 20301-2600

November 21, 1989

INTERNATIONAL
SECURITY POLICY

Dr. Matthew Meselson
Professor of Biochemistry
Harvard University
7 Divinity Avenue
Cambridge, Massachusetts 02138

Dear Dr. Meselson:

It was nice to see you again at the AAAS Colloquium on Science, Arms Control, and National Security. I very much enjoyed your talk on chemical weapons disarmament. Your mention of neutron irradiation as a method of non-intrusive analysis of a chemical weapon fill was of particular interest to me. As a 1989-90 AAAS Fellow in Science, Arms Control, and National Security, I am pursuing studies of technologies applicable to monitoring and verifying a chemical weapons convention. I would be very grateful if you could provide me with some information and/or references on this technique.

I was also very happy to learn of the Chemical Weapons Convention Bulletin which comes under your fine editorship. It is impressive in its comprehensiveness and detail, and has been most helpful to me.

As you requested, I am also including COL Hugh Stringer's address. I am sure he would be very glad to hear from you. He can be reached at:

Distinguished Visitors Quarters, Suite 5
Fort Shafter, Hawaii 96858-1100

Sincerely,

Diane M. Kotras
