Professor Matthew Meselson
Harvard

Dear Matt,

Sir - it was a pleasure and I look forward very much to working with you and with the "Harvard Colloquium on Chemical and Biological Armament and Arms Limitation". I realize now that our goals and objectives are infinitely closer than they are apart. And with that in mind please let me offer you my full support wherever and however you deem it appropriate.

Enclosed is 90-6 right off of the press. I will also send you all preceding issues as soon as I can arrange them in a binder with a partial index.

Once again it was a pleasure and I hope you have the happiest of holidays and
a great '91. Dick
