Subject: Translated papers.

Dr. Dr. Meselson,

Thank you for the manuscripts. They arrived the other day but I just opened them. Janet had one of her "program reviews" Monday and Tuesday followed by briefings on Wednesday so she's kept me quite busy. I was supposed to present a Division seminar today but a foot of snow closed the lab. It's an opportunity to catch up.

I will finish modification of the manuscript based on your comments and those I've received others, then send it off to the co-authors. I took out all discussion (speculation) about the source of strains.

I am sure there is sufficient interest for both you and your wife to present seminars here this summer should you be willing to.

Thanks again for your input and comments on the Sverdlovsk work.

Best regards,
Paul
