Bldg. A 3<sup>rd</sup> Floor  
Bedminster, NJ 07921

Dear Roy,

My friend Matthew Meselson, Thomas Dudley Cabot Professor of the Natural Sciences at Harvard would like to meet with you some time at your convenience to talk about verification problems under the Chemical Warfare Convention.

In addition to his primary scientific work in molecular genetics, he has long been active in arms control especially in respect to chemical and biological weapons. With Juleou Perry Robinson of Sussex University he co-directs the Harvard-Sussex Program in CBW Armaments and their Control, as well as acting as a consultant to various government agencies.

You may well have encountered him in the National Academy context, but, in any event, he felt more comfortable approaching you through me rather than directly.

May I tell him to call you to see if he can arrange a meeting?

With best regards,

Cordially,

Carl Kaysen
