Miss Eugenie L. Harris
600 River St. Apt. 3
Hoboken, New Jersey

Dear Miss Harris:

Bernard Feld has sent your letter of August 31 to me. I enclose two bibliographies on chemical and biological warfare that may be of some use to you. The next issue of Scientist and Citizen published in Saint Louis by the Committee for Scientific Information, 5144 Delmar Boulevard, Saint Louis, Missouri will be concerned with chemical and biological warfare and will contain a large amount of information of possible interest to you. Also, there were two articles by Elenor Langer in Science magazine, I believe in March of this year. You can get information on the chemical mace by writing directly to the manufacturers. I do not know the address or even the exact name of the company, but it is a division of the Smith and Wesson group. I imagine that the New York office of Smith and Wesson could direct you to the proper source of information.

Sincerely yours,

Matthew Meselson

Dear Professor Feld,

I am a graduate student in chemistry at Stevens Institute of Technology. and want to write at least an article exposing CBW research if I can gather enough information on it. Professor Lapidus of the physics department here recommended that I ask you for help. Please tell me anything you can about CBW and CBW research projects and give me the names of any people who might be willing to give me further information. Do you know anything about this aerosol spray called mace that the police may soon be using extensively in riot control? I would like to find out just what is going on at Ft. Detrick in Maryland. But it should be easier to get information on CBW research carried on in universities. Universities would also be more affected by an expose of their CBW research activities. I'll probably start with that if I succeed in collecting enough information about it.

Sincerely,

Eugenie L. Harris
