Dr. J. H. Davidson
Agricultural Department
The Dow Chemical Company
Midland Division
Midland, Michigan 48640

Dear Dr. Davidson:

Thank you for the article by Professor Bramble and for your offer of assistance in supplying information on 2,4-D and 2,4,5-T. In this regard, I would be very grateful if you could supply me with chemical analyses of typical lots of agents orange and white as they are supplied to the Department of Defense. I would like to know the concentration of the active ingredients as well as the nature and concentration of inert ingredients and impurities.

Sincerely yours,

Matthew Meselson
Professor of Biology
