Dr. W. F. Grant
Department of Genetics
McGill University at McDonald College
Montreal, Quebec
Canada

Dear Dr. Grant,

Thank you very much for your reprints on the cytogenetic effects of pesticides. We are most interested in this subject. In fact, a colleague of mine, Dr. Thomas Wegmann is conducting a small-scale experiment to determine whether or not 2,4,5-T has any cytogenetic effect in the mouse. Do you know of any references to such work done in animals? I hope you will keep us informed of anything you think may be of help to us in our design of a study of the effects of military defoliation in Vietnam.

Sincerely yours,

Matthew Meselson
Professor of Biology
