3rd February 1970.

Dear Matt,

Since I wrote to you enclosing a possible draft letter about C and BW, I have received your letter to me of January 22 and your memorandum about the policy for toxins. I will help Mr Richard Brooks if I can. As for the toxin question, I think that your reasoning is OK. It has not percolated through to the press here that toxins could cause the ~~defects~~ which your memorandum seems to anticipate. *difficulties*

With warm regards.

Yours ever,

J.H. Humphrey.
