Dear Professor Meselson,

please find enclosed a book manuscript which sets out to critically analyse the allegations of chemical warfare in Southeast Asia today. It is something I have been researching for a couple of years alongside a more general book on the Indochina region since 1975. I would be interested in any critical comments you may have on it.

Beside the fact that I know you are concerned with the issue I was hoping that, if you thought the book good enough, you could help me try to find a publisher for it in the United States. I am sure that you are a very busy man, but I gather from the New Scientist that you are acting in some advisory capacity to an American group which is opposed to CBW re-armament. If you are too busy to assist possibly you could see if they could somehow act as agents for me in America to help find a publisher.

/ I am sure that you will agree that the issue is a matter of urgency and it would be good to get it published as soon as possible.

Could I ask you to advise me whether I should draw the attention of the UN investigating team to the work that I have done? They would be interested to look at it wouldn't they?

I have also sent a copy to your colleague, JP Robinson in England.

I hope to hear from you soon.

Yours Sincerely,

  
Grant Evans.
