- 1) The present NIO for CW is not influential and is on his way out.
- 2) The CW section of CIA now numbers 10 people, headed by a woman (whose name he told me)
- 3) STAP briefed DCI CASEY on Sverdlovsk a week or so ago. It was difficult to reopen the matter formally since the CIA officer concerned, Julian Hoptman, was now dead.
- 4) On YR probabilities:
 - that there really was CW: maybe 20-30 percent
 - that it involved mycotoxins: maybe 2 percent
 - that the yellow spots were anything to do with it: 0 percent.
